REFRESHMENTS  
SERVED AT 3:20 PM

## The Pacific Northwest in 2100: An Alternative Futures Perspective on Salmon Recovery

The primary goal of the Salmon 2100 Project is to identify practical options that have a high probability of maintaining biologically significant, sustainable populations of wild salmon in British Columbia, Washington, Idaho, Oregon, and California. The prescriptions developed and discussed are likely to produce ecologically viable results, though most are much more socially disruptive than current recovery strategies.
