

Dr. Stephen Déry has three degrees in Atmospheric Science: a B.Sc. and M.Sc. from York University and a Ph.D. from McGill University. He came to UNBC in 2005 as Canada Research Chair in Northern Hydrometeorology, focusing on how rising temperatures affect the water cycle. Prior to this appointment, Stephen was a researcher at the prestigious Lamont - Doherty Earth Observatory of Columbia University outside New York City and also held a Visiting Research Scientist position at Princeton University in New Jersey. In addition to this Canada Research Chair position, Stephen has appointments in the Chemistry, Environmental Science and Environmental Engineering undergraduate and Natural Resources and Environmental Studies graduate programs at UNBC. He teaches senior-level courses in Atmospheric Science and has developed a new course simply entitled, Ice and Snow.
